Per 3 days: \$250.00

Per Week (includes weekend): \$375.00

Please note:

Popcorn and supplies are sold separately.

All machines include a popcorn scoop.

Size and design is subject to availability.

Standard size kettle is 6oz—8oz.

POPCORN Q&A

What is a popcorn kit?

A popcorn kit is a pre-measured, portion controlled package of raw popcorn and coconut oil. Simply cut open both sides of the pouch and pour all the contents into the kettle at the same time. Dispose of the empty pouch.

Nothing to measure and no mess!

What size popcorn kit do I need?

If renting a popper with a kettle smaller than 12oz, then you need the 8oz popcorn kits.

If renting a popper with a 12oz kettle or larger, you will need the 10oz popcorn kits.

How much popcorn can a popcorn machine produce and how fast?

Most machines can pop a batch in as little as 3 minutes.

A machine using an 8oz popcorn kit, will pop about 6oz of corn per batch.

A machine using a 10oz kit will pop about 8oz of corn per batch.

Can I use a 10oz kit in an 8oz popcorn machine?

No. Too much popcorn can cause the kettle motor to break, lead to unpopped kernels, and burnt popcorn.

What type of power requirements do I need?

Most rental machines will work on a standard 120V, 15 Amp outlet.

Do I need to clean the machine before returning it?

Cleaning is generally included. We want you and your guests to have a good time. Leave the cleaning to Fun City. (In some cases, a cleaning charge may be applied if something other than the recommended popcorn and oil has been placed in the kettle).

POPCORN MACHINE OPERATING INSTRUCTIONS

1. If using a tabletop only machine, be certain to place it on a flat level surface. If using a machine on a cart, be sure that the cart is on a flat level surface.
2. Plug the popcorn machine into the power source.
3. There are three switches on the popcorn machine:
 - LIGHT & WARMER SWITCH
Turns on heat to bottom corn pan and light.
 - KETTLE MOTOR SWITCH
Turns on motor, which turns the agitator/stirrer
 - KETTLE HEAT SWITCH
Turns on the heat element allowing the kettle to get hot
4. Turn the light and warmer switch to the on position.
5. Turn the kettle heat switch on. Allow 3-5 minutes for the kettle to warm
6. Open your popcorn kit and pour the entire contents (raw corn and oil) into the kettle.
7. Close the kettle lid.
8. After a few minutes, you will start to hear the corn pop. When the popping is about 3 seconds apart, it is usually ready to dump. Waiting too long will result in burnt popcorn. Dumping too soon will lead to unpopped kernels. You may need to practice a few times.
9. Immediately after dumping your batch, you may repeat steps 8-10 if you need to pop more.
10. If you are done popping for now, turn the kettle motor switch and kettle heat switch to the off position

Never touch the kettle while the kettle heat switch is on or just after having popped.

If a batch of popcorn has been burned, you must first clean the inside of the kettle before preparing another batch. Turn off the motor and kettle heat, wait for the kettle to cool and wipe out the inside with a damp cloth.

Can I make Kettlecorn or Caramelcorn in the popper?

No. Specialty popcorn requires specific types of equipment. Placing anything other than coconut oil and raw kernels into the kettle can cause damage and ruin your popcorn.

COTTON CANDY Q&A

Can I mix colors or flavors in the cotton candy machine?

It is possible to combine different colors or flavors of floss sugar in the machine. However, it is suggested that you test your creation prior to serving.

Can I make different colors and combine them?

In order to make multiple colors or flavors of cotton candy, you would need to run each batch separately. This would require you to spin out all the sugar of your current batch before starting a new color or flavor.

What are the electrical requirements?

A cotton candy machine uses a standard 120v, 15 amp outlet. Keep in mind that if you power the machine using an extension cord you may see some fluctuations in the heat and/or machine motor.

How much cotton candy can I get from a carton of floss sugar?

A serving of cotton candy actually uses very little sugar—often less than 1 oz. A 52oz carton of floss sugar can yield up to 60 servings of cotton candy. The larger your serving, the more sugar that you will need.

When estimating how much sugar you might need, be sure to factor in waste.

How much cotton candy will a machine produce?

Production is based mainly on operator skill. Based on practice, you may be able to produce 100-200 cones per hour.

Do I need a floss bubble?

If you will be using the machine outside, then a floss bubble is recommended. Depending upon your experience making cotton candy a bubble is optional.

Please note:

Syrup and supplies are sold separately.

All machines include an ice scoop and cone server.

All machines use standard ice cubes.

SNO-KONE/SHAVE ICE Q&A

What is the difference between Sno Kones and Shave Ice?

Sno Kones are a popular frozen concession food that consists of crunchy or coarse ice. Typically, the only added ingredient is flavored syrups. Sno-Kones are most commonly served in cone shaped cups.

What kind of ice do I need?

Both machines use only ice cubes.

Why don't you sell pumps for the syrups?

While Fun City can always special order pumps for your event, we chose to discontinue them in favor of squeeze bottles. Squeeze bottles allow for greater control in dispensing and less mess.

Do I need to refrigerate the syrups?

Sno-Kone/Shave Ice syrups do not need to be refrigerated. However, some customers like to refrigerate the syrups prior to serving as room temperature/warm syrups can increase the melting time of your finished product.

How much syrup will I need?

The amount of syrup you need depends upon how many servings you expect to produce and the size of your serving.

Shave Ice or Hawaiian Shave Ice or Hawaiian Ice differs from Sno-Kones in that it is a fine, powder-like snow. It is never crunchy. Shave Ice is most commonly served in flower cups or foam cups and often served with a spoon or spoon straw. Shave Ice can be flavored with syrups, toppings and inclusions. Shave ice is always made to order and is considered a premium concession treat as compared to sno-kones.

What are the electrical requirements?

All sno-kone/shave ice machine rentals use a standard 120v, 15 amp outlet. Keep in mind that if you power the machine using an extension cord you may see some fluctuations in the machine motor.

How much ice will I need?

The amount of ice you need depends upon how many servings you expect to produce and the size of your serving.

A standard sno-kone cup holds approximately 6oz of crushed ice. Therefore, you will need about half a pound (8oz) of ice cubes to produce one serving.

	6oz SnoKone Cup (Not Recommended for Shave Ice)	4oz Flower Cup	8oz Flower Cup	12oz Styrofoam Cup	16oz Styrofoam Cup	16oz Parfait Cup
